

Civil & Environmental Consultants, Inc.

Waste Transfer Facility Services

CEC provides a full range of waste management services to private industries, as well as public sector authorities and agencies. Specific industry experience with transfer and recycling facilities has provided keen insights on the financial influences and regulatory aspects of these projects.

CEC understands the economic, environmental and operational requirements of transfer and recycling facilities and the impacts these requirements have on the permitting and construction processes. Consideration is given to each of these aspects through all phases of the project, including site investigation, conceptual plan development, zoning modifications, permitting and construction. Site logistics are developed from sound knowledge of equipment management, facility operations, staffing, community relations, and awareness and interpretation of state and local government requirements.

CEC works with clients from concept to completion to develop waste transfer and recycling facilities that:

- provide short- and long-term operational flexibility with the capability to respond to changes in population, behavior patterns and economic growth;
- meet all federal, state and local regulatory requirements;
- are built around the client's business model; and
- minimize maintenance efforts and are durable.

CEC provides the following:

- Due diligence
- Feasibility study and site selection
- Geotechnical engineering
- Transportation planning
- Conceptual design and preliminary engineering
- Utility coordination and approvals
- Zoning, local municipal and county planning
- State environmental permitting
- Detailed design and construction plans
- Contracting and material procurement
- Equipment selection
- CQA and construction management
- Personnel training
- Operational and compliance support services
- Turnkey design and construction
